Possible natural avalanche in bridger range

Wolverine Bowl
Bridger Range
1/27/2023
Code
N-R3-D2
Elevation
8300
Aspect
NE
Latitude
45.83010
Longitude
-110.93400
Notes

I was skinning up the ramp on Friday when I thought I heard a jet flying over in the clouds, but the sound stopped instantly. I assumed that I heard an avalanche, but was solo on the ramp and had no desire to go that way for a better look. It was snowing and foggy. Today a friend said she could see a crown on the north side of Wolverine bowl that appeared to be 4 feet. With all that water, I thought something would go deeper, eh?
