

Scotch Bonnet – Rasta Chutes

Elevation: 10000 ft

Aspect: South

ECTN 18

35 cm thick slab

1-2 mm facets

We found a highly variable snowpack north of Cooke City today. This snowpit was on a south-facing slope on Scotch Bonnet, which had a thin snowpack with poor structure. We also found a deeper, stronger snowpack on a northeast aspect near Wolverine. Photo: GNFAAC

Advisory Region

Cooke City
