

Small Wind Slab - Sheep Creek Basin

Date

Thu, 02/09/2023 - 15:30

Activity

Skiing

On our 3rd lap on the North Side Burn in Sheep Creek, we traveled up the ridge to take a look at the steeper terrain to the west along the ridge. From our protected vantage point, we could see a recent wind slab that appeared to release naturally some in the past 24 hours. The crown was obscured, but I would code the avalanche as SS-N-R1-D1-S. The avalanche was approximately 3-6" deep, 25' wide, and ran for ~60'.

Region

Cooke City

Location (from list)

Sheep Creek

Observer Name

Eric Heiman
