

Surface Hoar at Buck Ridge

Date

Thu, 12/14/2023 - 01:25

Activity

Snowmobiling

From email: "Over the last couple days, I've been seeing very large [surface hoar](#) formations on most of the snowpack from ~7000 ft+. They continue to grow day to day, I've measured crystals over 5mm tall. Hopefully the warm temperatures over the next week will melt these before our next storm cycle, but only time will tell."

Region

Northern Madison

Location (from list)

Buck Ridge

Observer Name

Sebastian Gralla
