

Surface hoar observed at the top of Bradley Meadows

Date

Sat, 01/27/2024 - 17:50

Activity

Skiing

Well developed (2-3mm) surface hoar observed at the S shoulder of Bradley Meadows (at the top of the skin track). Some of the crystals had already been blown over, but most were still upright.

Region

Bridger Range

Location (from list)

Bradley Meadow

Observer Name

Dan Sandberg
