

Wind slabs on Mt Blackmore

Mt Blackmore
Northern Gallatin
1/10/2025
Code
SS
Aspect
N
Latitude
45.44450
Longitude
-111.00300
Notes

Wind slabs were the issue today. A lot had changed since Thursday when it was all sunshine and deep powder. Winds picked up and changed the landscape.

We found two small wind slabs that had released on their own, then watched a big one release from a falling [cornice](#), then triggered a small one (expected).

Overall, winds were the perfect speeds for moving snow which they did all day. Looking south, there was a massive plume coming off Mt Bole.

Number of slides
4
Number caught
0
Number buried
0
Avalanche Type
Soft slab avalanche
Problem Type
Wind Slab
