Notes

While traversing to our pit site in Sunlight Basin, we triggered a whumpfung [collapse](#) and a shooting crack up to 100' long across an adjacent slope. This [snowpit](#) on a SE [aspect](#) was made up of a dense [slab](#) of recent snow, sitting on top of many different layers of junky, faceted grains. [Propagation](#) was easy to find (ECTP 11, HS: 112).
