

Beehive Windslab Avalanche

Date

Sat, 03/01/2025 - 12:45

Activity

Snowboarding

Kicked off a wind slab avalanche 25ft wide on the west ridge of beehive basin. The wind slab was around 8-10ft deep and the debris slid almost to the flat a few hundred feet down the slope. The slide occurred around 9100ft on the east aspect. Neither me nor my partner were carried or caught in the slide.

The windslab that broke off was about 8-10 feet tall. It was mostly a huge section of a cornice that broke and the slope it fell down onto seemed to propagate a few inches down as well. The majority of the debris was from the cornice.

Region

Northern Madison

Location (from list)

Beehive Basin

Observer Name

Reed Lando
